

Cross feed ...

These are application instructions for mounting the 8" ENC 150 encoder to the cross feed axis.

Before proceeding:

- Read the instructions completely before beginning.
- Axis travel must be \leq encoder measuring length.
- Clean the mounting surfaces.
- Adjust drill depths as required.
- Save the alignment brackets after removal.

First Steps ...

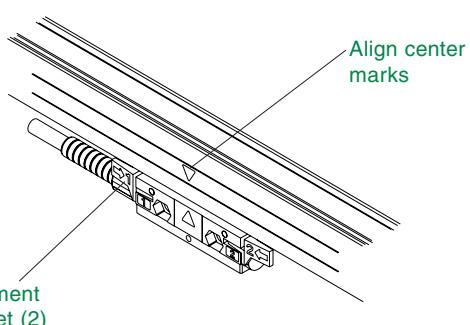

Machine

- ✓ Move the carriage to its center of travel.
- ✓ Mark the axis so that it can be re-centered easily.

Unpack the encoder in a safe, convenient location.

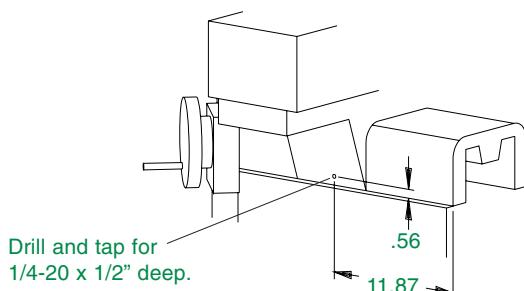

- ✓ Do not remove the reading head alignment brackets until instructed.

Cross feed installation ...

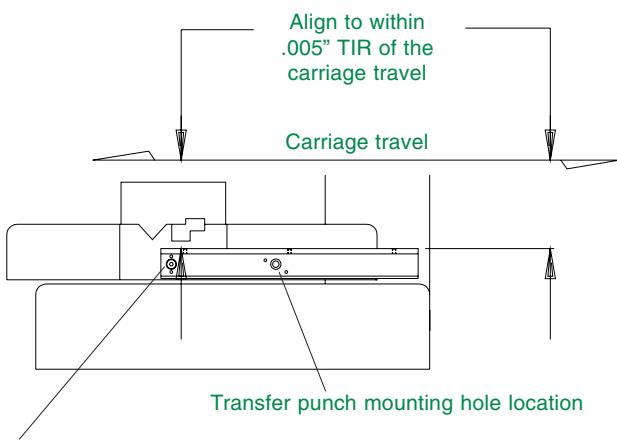

- Slide the reading head and brackets along the scale case until center marks on scale and reading head are aligned.

Spar installation ...

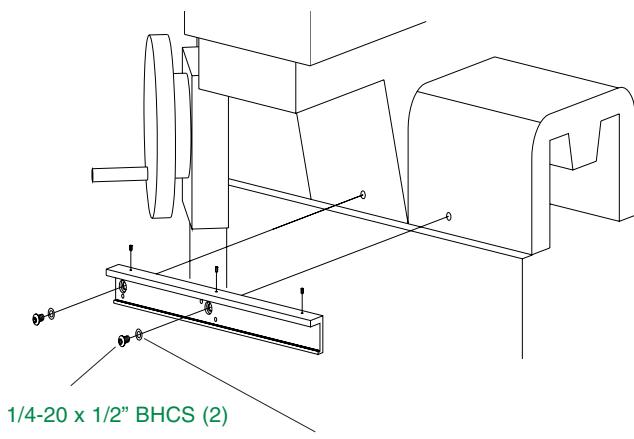

- Drill and tap first spar mounting hole location using the above dimensions.

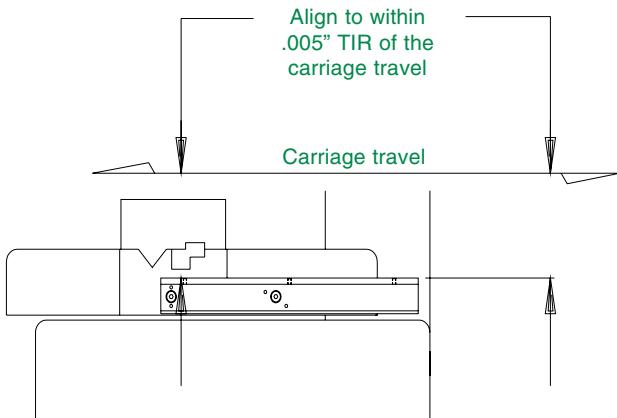

1/4-20 x 1/2" BHCS and * Flat washer (.017" thk.)

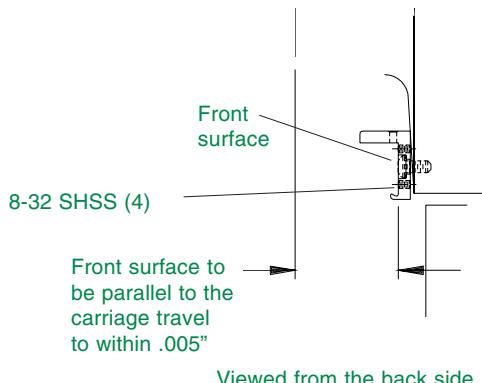

- Fasten the spar at one end.
 - Align the top of the spar to the carriage travel.
 - Transfer punch the second end mounting hole.
 - Remove the spar.
 - Drill and tap hole location for a 1/4-20 x 1/2" deep.

- *Attach the spar to the carriage*

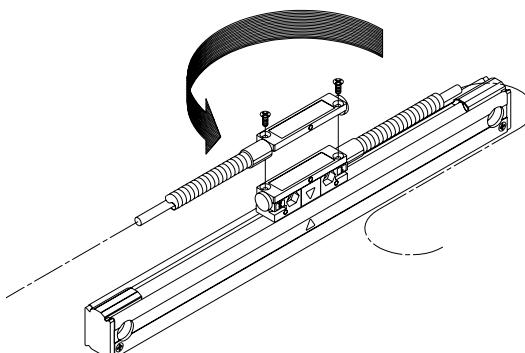

- Align the top of the spar to the carriage travel.

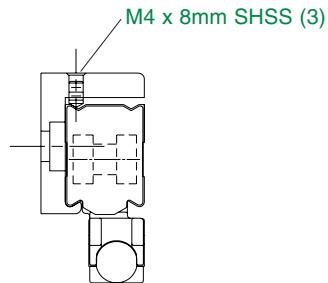

- *Insert the 8-32 SHSS into the spar as shown in the exploded view on front page.*
 - *Align the front of the spar to the carriage travel, use the leveling screws for adjustment.*
 - *With top and front surfaces aligned, secure the spar in place.*

Cable exit ...

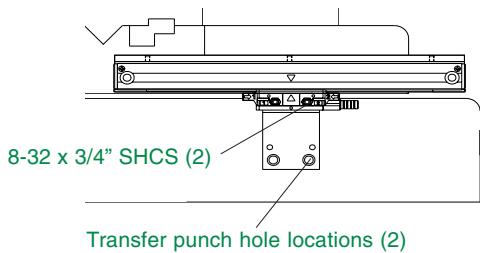

- *Determine cable exit direction before installing encoder.*
 - *To change cable exit direction; remove the base and rotate 180°.*

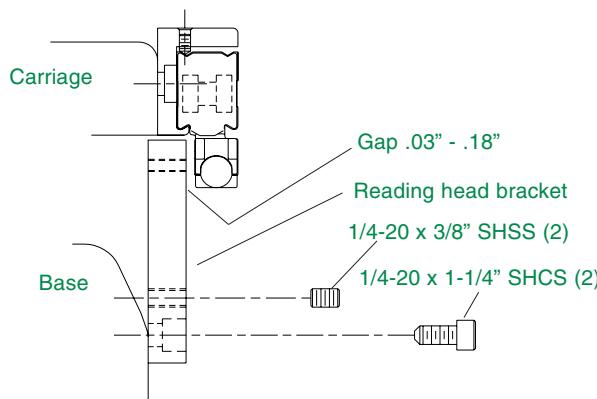

- Insert and center the encoder into the spar.
- Lock in place by inserting and tightening the three M4 spar set screws.

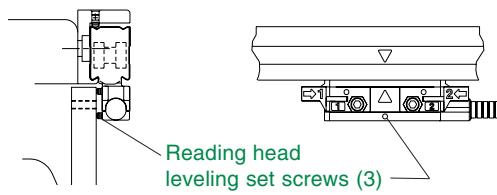

Reading head bracket installation ...

- Move the carriage to the center of its travel, attach the bracket to the reading head.
- Transfer punch the two mounting hole locations to the base.
- Remove the bracket, drill and tap the locations for 1/4-20 x 1/2" deep.

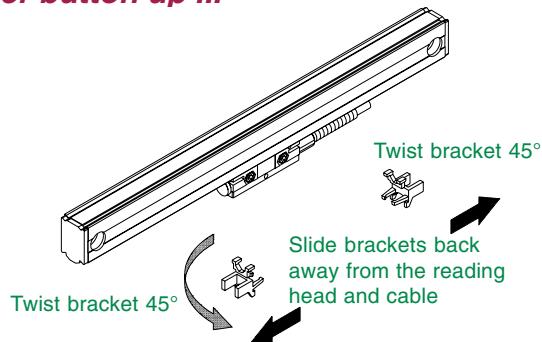

- Insert the two 1/4-20 set screws.
- Attach the bracket to the base.
- Adjust the set screws so that the bracket is parallel with the reading head, a gap of .03" - .18" will exist.
- Adjust the bracket so that the head mounting holes align with the bracket and secure in place.

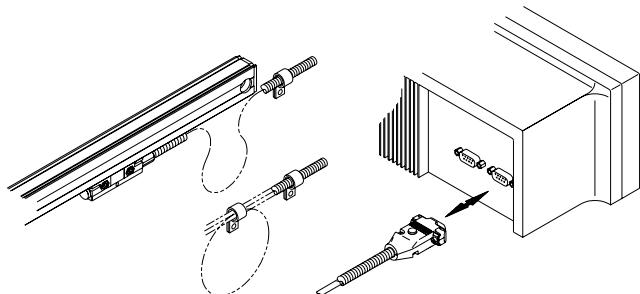

- Set leveling screws by placing a .001" - .003" feeler gage between the screw and the bracket.
- Adjust each screw until a slight drag is felt on the feeler gage.
- Insert two 8-32 x 3/4 SHCS and evenly tighten.

Encoder button up ...

- Use allen wrench from set screw adjustment to slide alignment brackets away from the reading head.
- Remove alignment brackets and save for possible future use.
- Move the axis through its full travel. Confirm that the assembly does not interfere with the machine movement.

Completing the installation ...

- Route the cable providing sufficient slack loops for machine movement to the readout.
- Secure cable by fastening with clips or ties.
- Attach the linear encoder connector to the readout.
